Dec. 2, 1966

Harold Weisberg
Hyattstown, Md

Dear Sir

I first became acquainted with you and your work from the Jack McKinney show in Philadelphia. Your sincerity and knowledge concerning the Warren Report impressed me so much that I had to read and re-read your book. The energy, perseverance, and research which you had to endure in writing the book still astounds me. Others are astounded also. For the first time in about six months I visited a friend's home and when I saw your book there I questioned him about it. He praised you and your book and mentioned he became familiar with you from the "Long John" show on WNBC in New York City. Because Long John uses people who only harass and interrupt guests his show tends to become a wrestling match. Any experts who appear on his show are always opposed by others who have only a superficial knowledge of the subject. Thus, they cannot discuss the subject, and hence have to employ harassing tactics.

About four weeks ago I heard Jack McKinney say on his program that someone investigated or rather inquired of the company that made Zapruder's motion picture camera and learned that the

camera did not take 18.3 frames per second. He did not state how many frames per second the camera took. I immediately wrote him a letter to find out if I misheard him and to find out the new number of frames per second the camera took. However, I have not heard from Jack. In a return letter could you inform me if the 18.3 frames per second is correct?

Also if you send me the selling price of your new book, I will send you a check so that I may be on the mailing list when the book is released. I just wish there were other ways I could help you.

Wishing you and your books greater success

I remain
Glen Myers
